

HOUSE TRAINING: USING THE LITTER BOX

Do I need to train my new kitten to use a litter box?

Cats by nature use a soil type surface for elimination. By providing a litter box with an appropriate and appealing substrate (material), most cats do not need to be trained to use it. At about 30-36 days of age kittens leave the nest to search out a loose substrate for elimination. The kitten learns specific areas and substrates to use by observation of the queen (mother). Kittens dig in the substrate and bury their stools and urine.

Is there anything that I need to do to aid this process?

Initially it is important that the kitten be confined to a small area with an appropriate sized litter box. This allows you to take advantage of a cat's tendency to eliminate in a loose material. As long as the kitty litter is the only loose substrate available, and especially if it is the same type of substrate that it is used to from its previous home, very little effort should be required to litter box train the kitten. About the only other indoor area that might appeal to a number of cats is the soil around houseplants. Ensuring that the cat is prevented from getting into houseplants, except when you are around to supervise deals with this problem. Kittens, like dogs, will need to eliminate after they eat, after they wake up, and after play. At those times place the kitten in its litterbox and praise her for elimination. A kitten does not need to be confined continuously, but should be supervised to prevent accidents and frequently brought back to the appropriate elimination location.

There are many types of litter materials available today. These include plain clay litters, fine "clumping" litters, recycled newspapers and many others. Some have materials added to control odor. The type you choose is up to you. Since the kitten will first start eliminating by following the cues of the queen, continuing with the same litter as used in the first home is helpful.

What size and type of litter box should I buy?

Initially, the size of the litter box should be determined by the size of the kitten or cat. A very small kitten may need a box with shorter sides for easier access. As the kitten grows, a larger box may be more appropriate. Some owners prefer litter boxes with covers on them. This is acceptable if it is acceptable to the cat. You need to be sure that the cat can negotiate the opening by stepping into it and that the cat is not too large to fit into the opening.

Where should I put the litter box?

The litter box should be placed in a location that is easily accessed by the cat, yet out of the way. Try to avoid congested household areas. The cat should have some privacy and quiet to eliminate. Laundry and furnace rooms are often used, but be sure that noise from household equipment is not disruptive and aversive to your cat. Try to put the litter box in an area that is convenient for you to check on and keep clean. Do not put food and water bowls right next to the litter box. If there are dogs in the home, then the litter box should be located where the cat can eliminate without being bothered by them.

How often should I clean the litter box?

One of the most important factors in continued litter box usage by house cats is cleanliness. Cats are very fastidious animals, and spend time each day making sure their coat, feet and face are clean. One can assume that they would like a clean place to eliminate. The number of cats in the home and litter usage determines the time between litter cleaning. Fecal material should be removed on a daily basis, whether the litter material type is clumping or plain. For clumping materials daily or every other day removal of urine material is recommended. For other litter material types, cleaning and removal of litter material should be done every 3-7 days. Remember, each cat is an individual, your cat may like more frequent cleaning of the

litter box to maintain good usage patterns. Some cats dislike the odor of the cleansers used to clean litter boxes, so rinse the box thoroughly after each cleaning.

How many litter boxes do I need in my home?

The number of litter boxes needed depends on the number of cats, the size of the home, the temperament of the cat, and other pets in the home. When there are multiple cats, multiple pans should be available in different locations, not all side-by-side in one place. Because there can be varied interactions between individuals, multiple boxes in multiple locations allow house-mates to avoid one another if they so choose. Even for only one cat, two boxes may be appropriate depending on the layout of the home and the individual preferences of the cat. Some cats prefer one box for urine and one for stool. Some physical limitation may prevent a cat from climbing stairs and so a box in the location the cat frequents is needed. In general, there should be at least one litter box per cat, and some behaviorists advise one more box than the number of cats in the house.

What if the kitten does not use its litter box?

Should the kitten begin to eliminate in locations other than its litter box, first review the steps above. Is the litter in an area that is appealing and easily accessed by the cat? Is there anything in the area that may be a deterrent? Is the litter box being cleaned often enough? Are there enough litter boxes for the number of cats? To determine the most appealing litter for your cat, offer two or more different litters in the same type of box, side-by-side and see which one, if any, the cat uses most frequently. Next, determine the type of litter box the cat prefers by offering two or more litter box types side-by-side (each with the preferred type of litter). You can determine the cat's preferred location by offering the preferred litter box with the preferred litter in two or more locations and determining which one, if any, the cat uses more frequently. If litter box problems then persist, additional guidance and perhaps a behavior consultation might be required.
